

# Baby Steps

CSCI 6234 Object Oriented Design  
Spring 2023 - Group 5

Group Members :

Aditya Somani  
Aditya Kumar  
Nandita Venkatesh  
Niranchana Shiju

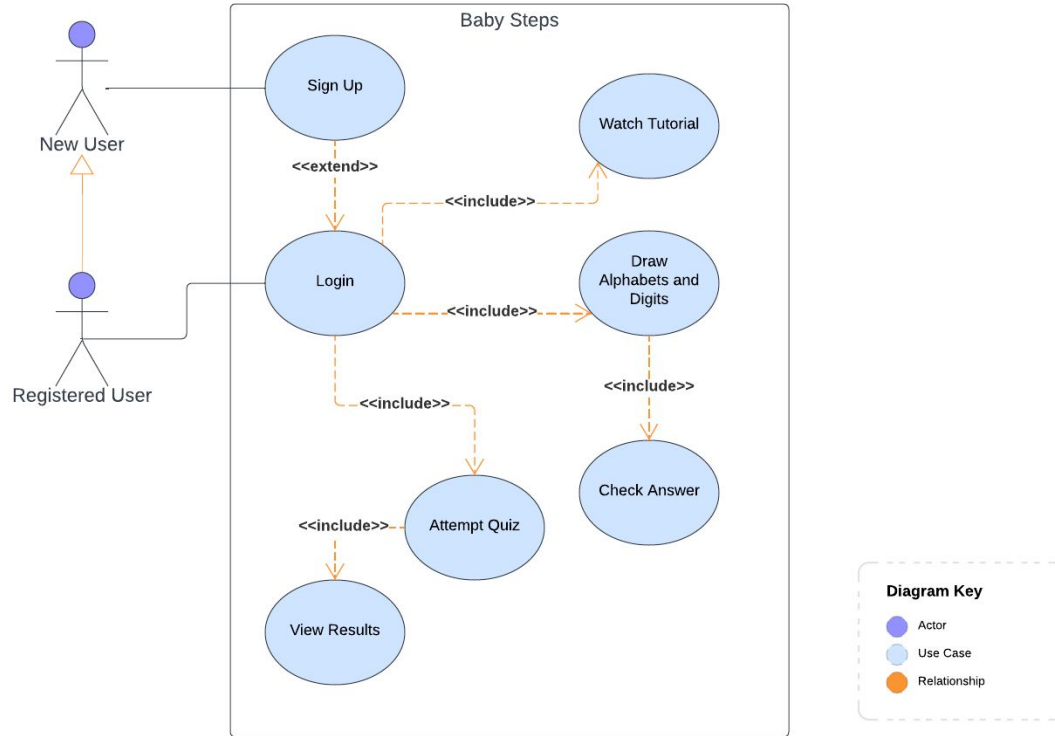

# Vision

- In the era of digitalization, the vision of **Baby Steps** is to help preschoolers learn how to write alphabets and numbers in an easy-to-use and rewarding method.
- The application aims at making learning accessible to all children.
- The objective is to create a global learning tool seated at the cross-section of technology, interactive content, and personalized learning methods to help children become active self-learners.

# Use Case Diagram

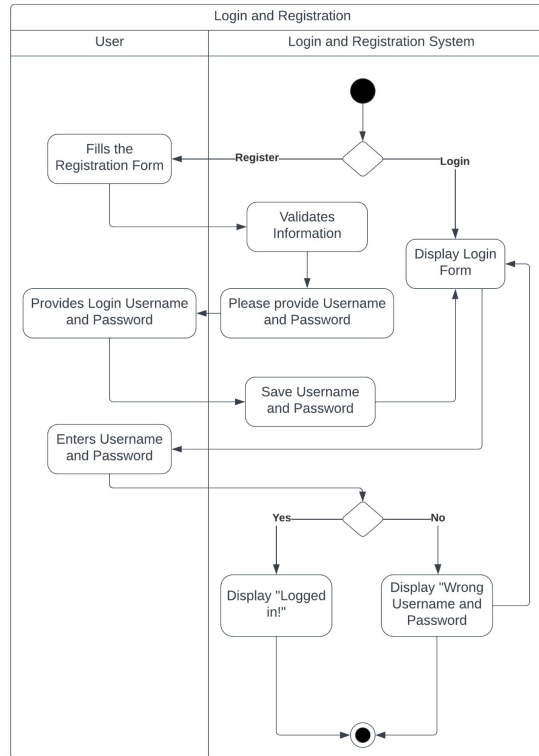

# Actors and Use Cases

- The actor is the parent/guardian of the pre-school child.
- The actor has two options upon opening the app : Sign in if they are not a registered user and Login if they are already registered
- Once logged in, pre-schoolers can watch a tutorial to learn how to write alphabets and digits
- They can practice by drawing these alphabets and letters and checking the answer ( The result is compared using an Artificial Intelligence algorithm)
- The pre-schoolers can also attempt a quiz and view results

# Project Architecture (Frameworks, Packages and Tools)

- **Language used is Python.**
- **Flask** : Web framework to create web apps
- **Jupyterlab** : Development environment that helps in illustrating the analysis process step by step
- **Tensorflow** : Library for ML tasks to train and test the model, Keras runs on top of tensorflow and provides functionality for working with deep neural networks
- **Seaborn** : Data visualization library based on matplotlib
- **Scikit-learn** : The confusion matrix functionality of scikit-learn is used to evaluate the accuracy of a classification.
- **NumPy** : High-performance multidimensional array object, and tools for working with these arrays.
- **Matplotlib** : Library for creating visualizations in Python
- **MySQL Workspace** : Database to store user account information

# Registration and Login Page

- Upon accessing the sign-up page, the user is able to register as a first time user with an E-mail ID, Username and Password.
- This is then sent to the database to store the user's account information.
- The user is then able to login to the website using the credentials provided during registration

This is a mockup of a registration form. It features a title 'Register' at the top. Below it are three input fields with placeholder text: 'Enter Your Username', 'Enter Your Password', and 'Enter Your Email ID'. A red 'Sign In' button is positioned below the input fields. At the bottom, there is a link that says 'Already have an account? Sign In here'.

This is a mockup of a login form. It features a title 'Login' at the top. Below it are two input fields with placeholder text: 'Enter Your Username' and 'Enter Your Password'. A red 'Sign In' button is positioned below the input fields. At the bottom, there is a link that says 'Don't have an account? Sign Up here'.

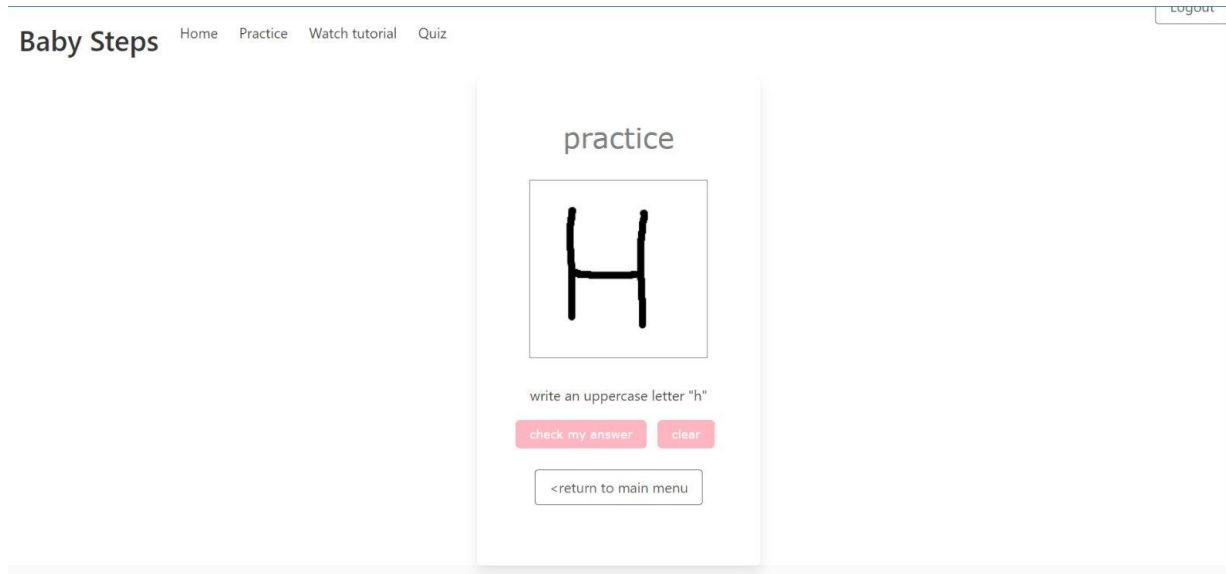

# Home Page

- From the home page, the user is able to access the following functions :
  - Practice
  - Watch Tutorial
  - Attempt Quiz
- By default the role is set to 'user', however if the role is 'administrator', the admin is able to view the 'Add Data' option as well.

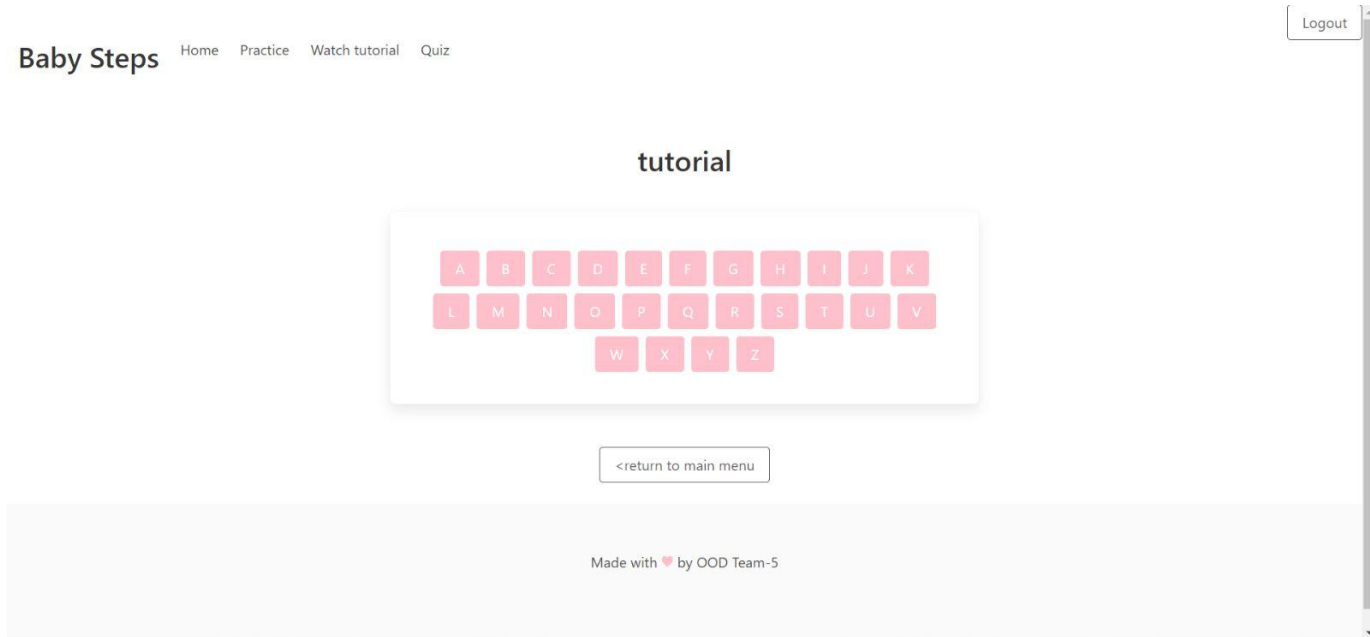

# Practice

- The practice page allows users to practice writing upper-case alphabets
- The user can check the answer to verify if the correct alphabet was written or they can clear the canvas to try writing the alphabet again

# Watch Tutorial

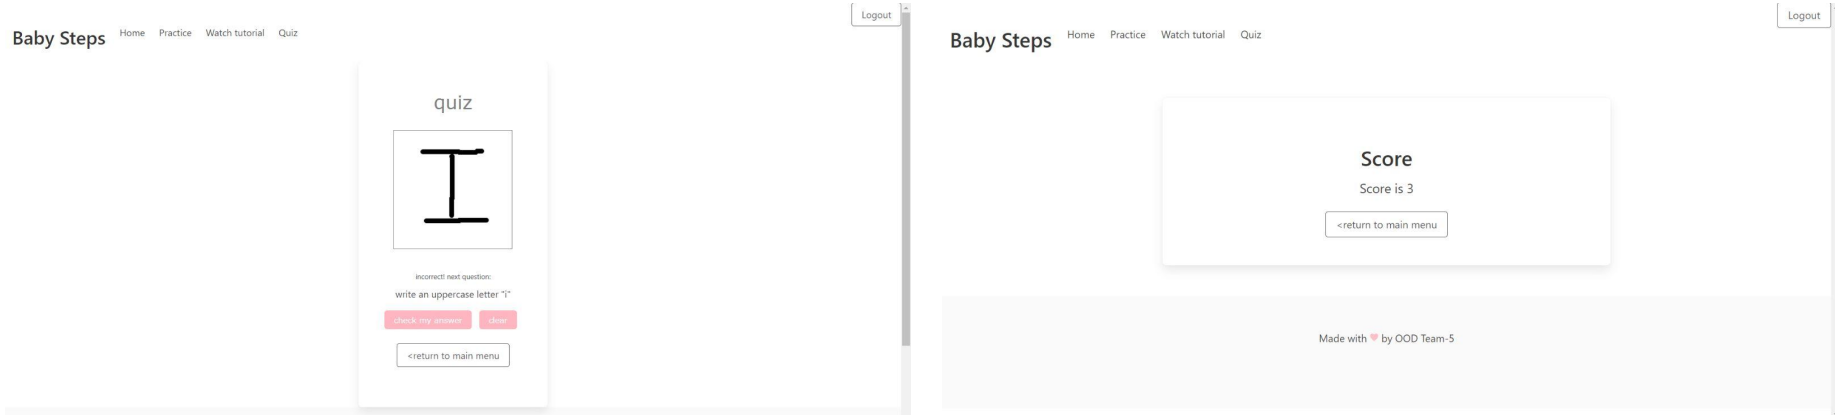

- In the watch tutorial page, users can click on a given alphabet which then leads them to a video on how to write the given uppercase alphabet

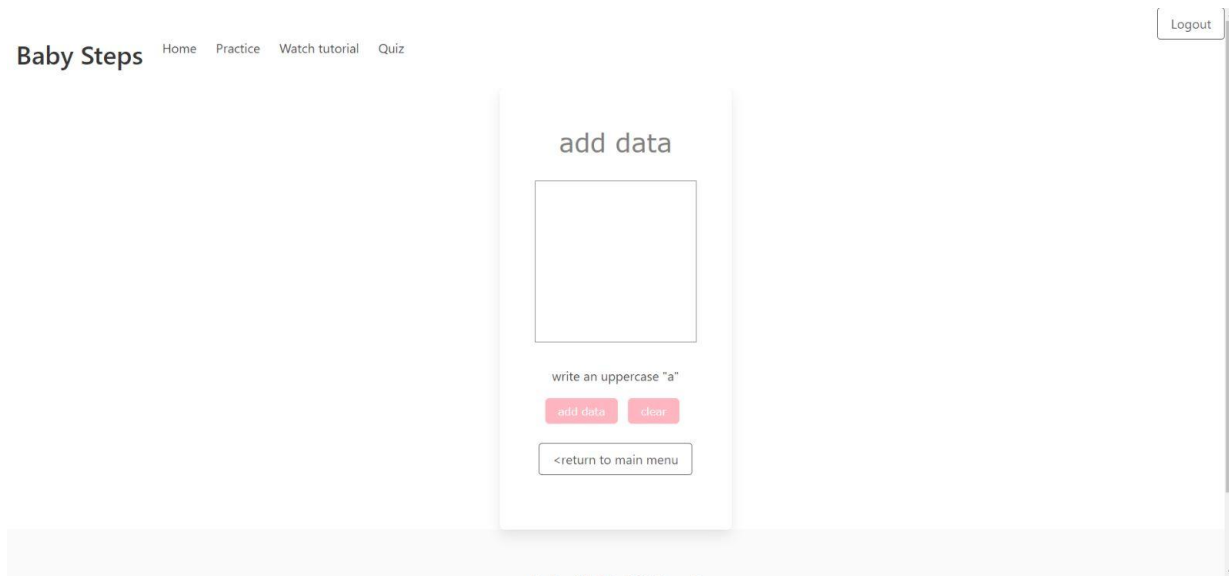

# Attempt Quiz

- The attempt quiz page allows users to write 5 uppercase alphabets and scores the users at the end out of 5 points based on how many answers they right.

# Add Data (Admin Only)

- The add data page allows administrators to add data to improve the model
- The current model has been trained on 416 data points, the 26 alphabets have been trained 16 times each.

The screenshot shows a web application interface for adding data. At the top left, the text 'Baby Steps' is followed by navigation links: 'Home', 'Practice', 'Watch tutorial', and 'Quiz'. At the top right, there is a 'Logout' button. The main content area is titled 'add data' and contains a large empty text input box. Below the input box, there is a prompt 'write an uppercase "a"'. Underneath the prompt are two buttons: 'add data' and 'clear'. At the bottom of the form is a button labeled '<return to main menu'. The entire interface is displayed within a browser window frame.

# Github and Demo Links:

## Links :

- [Demo Video Link](#)
- [Github Repository Link](#)

# Instructions to Execute Project :

- Pre-requisites : Pycharm or any other IDE, Jupyterlab, MySQL Workbench
- Download the code linked in Github, install all packages needed including jupyterlab, open the `model_training.ipynb` file from the scripts folder on jupyterlab and run to train the model. Then run the `app.py` file, open the link given to access the website!
